# Report: act_report

The WeRateDogs Twitter archive contains basic tweet data for their tweets. One of the columns contained in the archive are: number of retweets, number of favourites, dog name, and dog "stage" (i.e. doggo, floofer, pupper, and puppo)." Of 5000+ tweets, we have filtered for tweets with ratings only and there are about 2356 however, very few tweets have the dog "stage".

Not minding that we still tried to find out what dog stage might be more popular and here are a few insights.

First, let's look at the distribution of the dog stage, how many dogs of each stage do we have here?

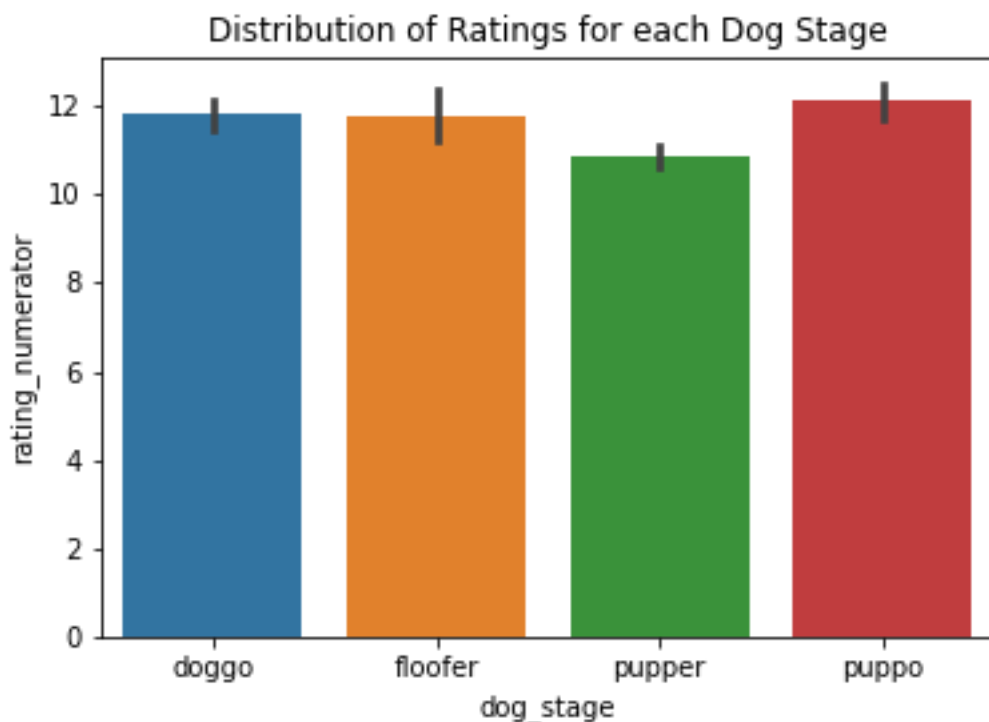

We only have a few dog stages here but it looks likes when a dog it in the pupper stage its more likely to be stated a tweet.

Moving on let's look at some numbers.

Dogs in the puppo stage seem to have about 6,847 retweets on average, when compared to other dog stages, the doggo has an average of 6,189 retweets, the floofer has an average of 4,083 retweets and the pupper has an average of 2,982 retweets despite being the most stated dog stage in our dataset.

Now looking at the number of favourites we saw that the puppo stage has an average of 21,871 favourite count on average!! The doggo stage has an average of 17,109, floofer stage has an average of 11,675 favourites and the pupper stage has an average of 7,386 favourite count.

Finally, we are looking at dog stages with the highest rating on average.

If you follow WeRateDogs on twitter you know that most of the rating are over 10 but above ten if you catch my drift, but the puppo stage seem to have the highest rating on average.
